

1. Are the objectives and the rationale of the study clearly stated?

No changes required.

2. If applicable, is the application/theory/method/study reported in sufficient detail to allow for its replicability and/or reproducibility?

No changes required.

3. If applicable, are statistical analyses, controls, sampling mechanism, and statistical reporting (e.g., P-values, CIs, effect sizes) appropriate and well described?

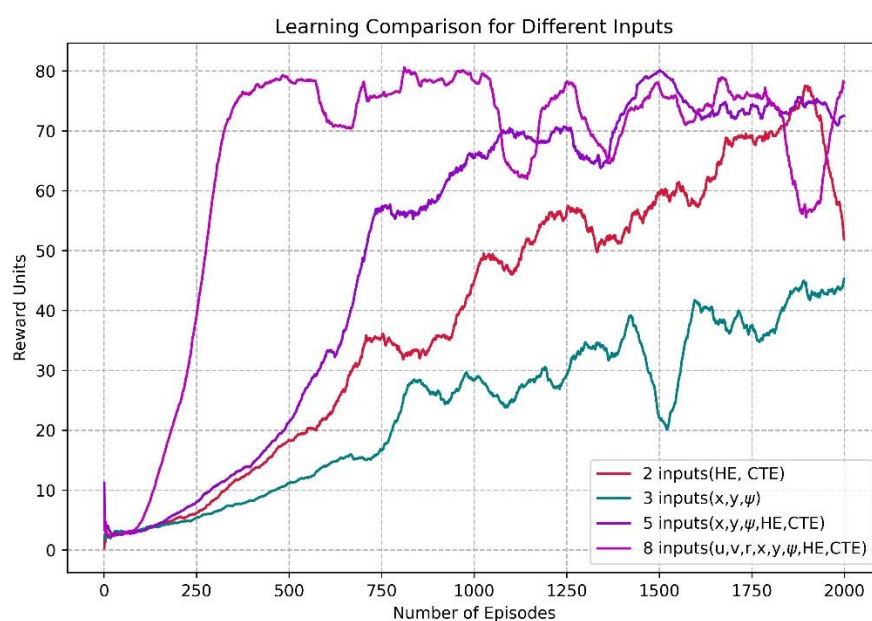

We included that Maximum absolute error table and RMS table for some scenarios. Please let me know, do I need to add more ?

4. Could the manuscript benefit from additional tables or figures, or from improving or removing (some of the) existing ones?

No changes required.

5. If applicable, are the interpretation of results and study conclusions supported by the data?

We can include this image in the paper. (as we did for DQN case in my thesis). I would like to reply only to the author only. Please let me know your comments.

6. Have the authors clearly emphasized the strengths of their study/theory/methods/argument?

No changes required.

7. Have the authors clearly stated the limitations of their study/theory/methods/argument?

I feel that this are the limitations sir.

1. It will not give the similar results for the dynamic system which requires higher sampling rate. (for example, Car or aeroplane).
2. Since it is a new field, theoretical guarantee is the part of which has the lot of opportunity to do research.

8. Does the manuscript structure, flow or writing need improving (e.g., the addition of subheadings, shortening of text, reorganization of sections, or moving details from one section to another)?

1. It would be better to re-package the experimental details in Section 5 into a separate "Experimental Setup" section.
2. The experimental results in Section 5 are not well organized. Particularly, the results of different methods are distributed throughout the whole section and far from each other and the describing text, which makes it difficult to read and compare. Moreover, Figure 21-25 are even put along the references.

Changes are required from the awanish side. @awanish, could you please share your suggestions sir...!

9. Could the manuscript benefit from language editing?

I have no idea about this part.
